Languages and tools:

Main
JavaScript
Node
React

Other
Html5, CSS, sassy CSS, canvas elements websockets, WordPress, visual studio, PowerShell, notepad+, eclipse, chrome developer tools and react plugin for chrome developer tools, Rockstar (programming language), MongoDB –nosql, NGINX, UNIX specific commands.

Detail
Most occupational experience has been with vanilla JavaScript. I have a slight experience of professionally using Node.js, including Babel and Webpack. However, I have had limited experience with jQuery, React, Java and NoSQL. Though I have done a large amount of research into React I have not yet used it practically.

Non-computer skills

Having studied psychology and political psychology with a focus on the empirical and scientific side and working with the liberal democrats. I have a very strong understanding of how people come up with different opinions with the same information.

Further having an enhanced knowledge of clinical psychology has given me insights into mental health and how best to act in any situation. Added to this I have a vague understanding of advertisement psychology

Adding to this I achieved over 100,000 words in online creative writing which has developed my analytical ability, commitment and prose. Adding to my studies in my ability and performance in report writing and presentation ability.
